that comprises comparing the expression levels of a gene encoding the NOR 1 receptor protein between patients and healthy individuals. Specifically, the NOR-1 gene, also referred to as MINOR, is expressed in the specialist white blood cells known as escinophils and is involved in mediating an allergic reaction. The present invention describes a differential display method that can identify the expression level of this gene in order to identify its usefulness in diagnosing allergic diseases such as atopic dermatities. Purthermore, compositions can also be used to screen compounds for the treatment of allergic diseases. Accordingly, they exhibit various activities including antiallergic, antiinflammatory and dermatological. This polynucleotide sequence is the human NOR-1 cDNA sequence of the invention. 0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                  Treating inflammatory immune disease such as arthritis, comprises suppressing expression level of NURR subfamily of nuclear transcription factors, or corticotropin releasing hormone receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                       member. The present nucleic acid sequence represents the human nuclear receptor NOR1 gene of the invention. Note: The present sequence is not shown in the specification but was obtained from Genbank (1651190)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ACTTCGCTCTCCCGCGCGCTCACACCCCTCTTGCCCTGAGCCCTTGCCGGTGCAGCGCGG

```
The invention relates to detecting (M1) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (Gs) identified by DNA chip analysis as given in the specification, and comparing the expression level to an expression level in an unactivated GC, where differential expression of G is indicative of GCA. Also included are modulating (M2) GA by contacting GC with an agent that alters the expression of at least one gene in Gs; (2) screening (M3) for an agent capable of modulating GCA or an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the gene expression or profile; (3) detecting (M4) an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by detecting the level of expression in a sample of the tissue of gene(s) from Gs, where the level of expression of the gene is indicative of inflammation; (4) treating (M5) an inflammation (especially chronic) or in a tissue, an allergic response in a subject to a pathogen or sterile inflammatory disease, by contacting a tissue having inflammation with an expression of gene(s) from Gs in the tissue. M1 is useful for detecting GCA; M2 is useful for modulating GA; M3 is useful

c for screening an agent capable of modulating GCA preferably in an inflammation in a tissue, M4 is useful for detecting an inflammation (especially rehonic) in a tissue, an allergic response in a subject capabage or storile inflammatory disease (e.g. exposure of a subject to a pathogen or sterile inflammatory disease (e.g. psoriasis, rheumatoid arthritis, glomerulonephritis, asthma, thrombosis, cardiac reperfusion injury, ARDS, adult respiratory distress syndrome, inflammatory bowel disease, crohn's disease, ulcerative colitis, periodontal disease, also bacterial cinfection, profit infection, profit infection, profit of the print of infection, profit infection, cinfection, profit on the present sequence represents a gene differentially expressed in granulocytes. Note: The sequence data for this patent did cont form part of the printed specification, but was obtained in electronic format directly from MIPO at the print of the printed specification, but was obtained in electronic format directly from MIPO at the print of the print
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 178
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          358
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   540

RESULT 4

```
The invention relates to a novel isolated polypeptide (NOVX) comprising a mature form of any of the 37 amino acid sequences fully defined in the comparization of any of the 37 amino acid sequences fully defined in the comparization of participation. A polypeptide of the invention has antidiabetic, ancidate, hypotensive, antiparthisonian, antionnulant, osteopathic, antiarthritic, antiinflammatory, dermatological, antiasthmatic, and antiantlammatory, dermatological, antiasthmatic, and antiantlammatory, dermatological, antiasthmatic, and antiantlammatory, the polypeptides, nucleic acid molecules and antibodies are useful in the manufacture of a medicament for treating a syndrome content of associated with a human disease, preferably a NOVX-associated disorder. The nucleic acid molecules, polypeptides and antibodies are useful for treating, preventing or diagnosing diseases such as metabolic disorders, diabetes, obesity, infectious diseases such as metabolic disorders, disease, parkinson's disease, (viral, bacterial, fungal, contential, independent and protocoal), anorexia, cancer, cardiovascular diseases (hypertension, atherosclerosis), neuvodegenerative disorders, Alzheimer's disease, epilepsy, immune disorders and antibodies content and various dyslipidaemias. The nucleic acids and polypeptides as targets for the identification of small molecules that modulate or inhibit e.g. neurogenesis, call differentiation, call contents, and various dyslipidaemias. The identification of small molecules that modulate or inhibit e.g. neurogenesis, call differentiation, call contents, and various disponesis, wound healing and angiogenesis, in generation of antibodies that bind immunospecifically to Novy ansate and antibodies that bind immunospecifically to Novy and antibodies in propertion and antibodies that bind immunospecifically to Novy and antibodies in propertion of antibodies in propertion and antibodies i

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               셤
                                                                                                                                                                                                                                                                               The invention relates to a combination comprising several polynucleotides having any one of 127 sequences (S1) such as the sequence of human call calmodulin gene, human mRNA for KIAA0310 protein, leukotriene A4 hydrolase, human CG1-142 protein mRNA, human K+ channel beat 2 subunit mRNA, etc., and their complements. The cDNAs are differentially expressed to him LPS (Hippopolysaccharide)-treated foam cells. Also included are obtaining an extended or full length gene from a library of nucleic acid sequences, an expression vector containing the nucleic acids, a host cell obtaining an extended or full length gene from a library of nucleic acid sequences, an expression vector containing the host cell, and a composition comprising a purified antibody that specifically binds to the proteins. The foam cell-expressed nucleic acids are useful for a high throughput detection of differential expression of one or more composition comparison with a standard defines early, mid or late throughput screening of a library of molecules or compounds to identify a ligand which binds a polynucleotide. The library is chosen for high throughput screening of a library of molecules or compounds to identify a ligand which binds a polynucleotide. The library is chosen from by untifying a ligand from a sample for making a antibody. The compounds to identify at least one ligand which specifically binds a comparison, for purifying a ligand from a sample for making a antibody. The compounds to identify at least one ligand which specifically binds a conforwascular disorder. The foam cell-expressed nucleic acids are useful conformation of a microarray which can be used for detecting related coll-expressed nucleic acids are useful coll-emptre on a microarray which can be used for detecting a category at heavestly diagnosing cardiovascular disease, as elements on a microarray which can be used for detecting a coll-expression is sample, diagnosing cardiovascular disease, is upregulated in LPS treated foam cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                238

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New combination comprising several cDNAs that are differentially expressed in activated T cells, useful for diagnosing, treating, staging or monitoring treatment for allergy, cancer, infectious and/or autoimmune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention relates to the sequences of several cDNAs that are differentially expressed in activated T cells. The sequences of the invention may have antiallergic, cytostatic, immunosuppressive and antimicrobial activity and may be used in gene therapy. The invention also comprises a method for screening samples for differentially expressed genes and a method for detecting these cDNAs by hybridisation. The methods and compositions of the present invention are useful for diagnosing, treating, staging or monitoring treatment for allergy; cancer, chronic graft versus host disease, infectious and/or autoimmune disorders. The present sequence represents a CDNA of the invention that is differentially expressed in activated T cells
                                                                                                                                                                                                                                                                                  A---TCTTTTTAAAAAATAGTATGAATGTGAATACTAGAAAAGATTTAAAAAATAGTATG

                                                                                                                                     This is the nucleotide sequence of a novel human neuron-derived orphan nuclear receptor gene. The open reading frame encodes a protein of 626 amino acids, which has high homology to the rat NOR-1 receptor. The protein contains several DNA binding domains including P, D and A boxes which also have high homology to the rat NOR-1 DNA binding domains. The nucleic acid and protein can be used to diagnose brain neuronal diseases, such as Alzheimer's disease, Parkinson's disease. Further, the genetic diseases can be treated using the receptor as it inhibits expression of a gene by binding to it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                638

The present sequence is that of human nor-1 nuclear receptor nucleic acid 165190. Nor-1 has been identified as a molecular target for therapeutic intervention in the treatment of myeloid leukaemia. The invention provides methods of inhibiting the proliferation of a haematopoietic stem cell or a haematopoietic myeloid cell by modulating the level of a nor-1 and/or nur77 nuclear receptor. This involves increasing the level of the receptor polypeptide or polynucleotide. e.g. by administration of a vector comprising the polynucleotide. A claimed method of treating leukaemia comprises modulating a nor-1 and/or nur77 nuclear receptor in a haematopoietic stem cell or myeloid cell. Also claimed are methods of identifying an upregulator of expression of nor-1 and/or nur77, of identifying a compound for the treatment of leukaemia, and a mouse model for leukaemia comprising a mouse having defective nor-1 and nur77 nucleic
                                                                                                                                                                                                                                                         Inhibiting proliferation of a hematopoietic cell, useful for treating or preventing leukemia, comprises modulating the level or activity of nor-1 and/or nur77 nuclear receptor.
                                                                                                                                                                                                                                                                                                                  Disclosure; SEQ ID NO 1; 101pp; English.

The present invention describes a method (M1) for screening for an antinoplastic agent. The method involves exposing cells to a chemical agent to be tested for antineoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (given in ABL61664 to ABL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. M1 can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of M1, and the data is sufficient to convey the chemical structure and/or properties of the agent. M1 can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney, prostate or pancreatic cancer, adenomical cancer, infiltrating ductal cancer, infiltrating ductal cancer, infiltrating cancer, infiltrating ductal cancer, infiltrating cancer, squamous call carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cening for anti-neoplastic agent involves exposing cells to a chemical ont to be tested for anti-neoplastic activity, and determining a change expression of a gene of a signature gene set.

                                                                                                                            ò
                                                                                                                                                                                                                         à
                                                                                                                                                                                                                                            The present invention relates to PRO proteins and their coding sequences.

The PRO proteins are useful for diagnosing and treating a B cell related disorder, eg. X-linked infantile hypogammaglobulinemia, polyasccharide antigen unresponsiveness, selective IGA deficiency, burkitt's IMT proper IGM, transient hypogammaglobulinemia of infancy, Burkitt's IMT presensitivity, rheumatoid arthritis, autoimmune mediated haemolytic anaemia, myasthenia gravis, hypoadrenocorticism, glomerulonephritis, or anytoisnin spondylitis. The PRO proteins are also useful for preparing a medicament for treating a condition that is responsive to the PRO protein, e.g. cancer or immune-mediated inflammatory diseases. The PRO coding sequences are useful as hybridization probes in chromosome and gene mapping, in preparing PRO proteins, or in generating transgenic animals or knockout animals, which in turn are useful in the development and screening of therapeutically useful reagents.

This invention relates to the novel association of protein sequences (and the genes which encode them) to the NF-kappaB pathway. The invention may be useful for the production of compounds with an antinflammatory, cytostatic, hepatotropic, virucide, antiarthritic, antinflammatory, cytostatic, hepatotropic, virucide, antiarthritic, antinflammatory, cytostatic, hepatotropic, inmunosuppressive or vulnerary activity or for gene therapy. The proteins and nucleotides are useful for diagnosing, preventing, treating, or ameliorating conditions or diseases associated with the NF-kappaB pathway. The condition is an immune disorder, an inflammatory disorder.

CC diseases associated with the NF-kappaB pathway. The condition is an immune disorder, an inflammatory disorder.

CC diseases associated with the NF-kappaB pathway. The condition is an immune disorder, an inflammatory disorder in inflammatory disorder in the patic disorders, Hodgkin's lymphomas, haematopoietic tumours, hyper-IgM syndrome, hypohidrotic ectodermal dysplasia, x-linked anhidrotic conformal dysplasia, immunodeficiency, viral replication, host cell converting by the patities of immune responses, rheumatoid arthritis, inflammatory bowel disease, colitis, asthma, atherosclerosis, cachexia, euthyroid sick syndrome, stroke, BAE, autoimmune disorders, disorders related to aberrant acute phase responses, hypercomenical conditions related to organ transplant conditions, blirth defects, necroic lessions, wounds, crycumonenical conditions related to organ transplant concers and HIV propagation in cells infected with other viruses. The present sequence is that of a human gene which is necessing hypering by the inch hy, the index of the novel association with the NF-kappaB pathway of the liventh hypering hypering and the paper in the specification but appear in the specification but
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 850
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         273
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                213
                                                                                                                                                               New isolated polynucleotides and polypeptides associated with NF-kappaB pathway, useful for diagnosing, treating, or preventing disorders or diseases associated with NF-kappaB pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CCCTGCGTCCAAGCCCAATATAGCCCTTCCCCTCCAGGTTCCAGTTATGCGG--CGCAGA

The invention relates to a composition comprising a plurality of cDNAs for detecting the altered expression of genes in an immunological cordetecting the altered expression of genes in an immunological condition also relates to a method of diagnosing or monitoring the treatment of an immunopathological condition in a sample, comparising obtaining nucleic acids from a sample, contacting the nucleic acids of the sample with an array comprising the plurality of cDNAs under conditions to form one or more hybridisation complexes, detecting the hybridisation complexes and comparing the plurality of cDNAs under conditions complexes with the level of hybridisation complexes with the level of hybridisation complexes or detected in a non-diseased sample, where an altered level of the detected hybridisation complexes correlates with the presence of an immunopathological condition. Also disclosed are an expression profile comprising a microarray and a plurality of detectable complexes and a method for identifying a plurality of polynucleotide probes. The cDNAs are useful as hybridisable array elements in a microarray for monitoring the expression of target polynucleotides. The microarray for monitoring the expression of target polynucleotides. The microarray can be used in drug discovery and development, toxicological and carcinogenicity studies, forensics or pharmacogenomics. The composition and also be used in drug discovery and development, toxicological and carcinogenicity studies, forensics or pharmacogenomics. The composition may also be used in purification of a subpopulation of maxing directly for the treatment of the discovery and development, toxicological and carcinogenicity studies, forensics or pharmacogenomics. The composition may also be used in purification of a subpopulation of maxing directly formed to the printed specification but was obtained in electronic format directly formed but we have a part of the discovery and development of the discovery and development of the discovery and development of the d from USPTO at segdata.uspto.gov/sequence.html. NO 928; 50pp; English Π SEO Claim 1;

The gene was isolated from 16 day old rat embryo cerebral neurons induced into apoptosis by amplifying the sequence from CDNA using primers AAT28371-4. Antisense nucleic acids and ribosymes targeted to the gene can be used as agents for treating cerebral nerve

```

22; The present sequence is a coding sequence for murine Neural Orphan Receptor 1 (NOR1). NOR1, also known as Translocated in Extraskeletal Chondrosarcoma (TEC), is involved in the control of cell proliferation and apoptosis and is expressed mainly in the central nervous system. The NOR1 coding sequence was used to generate a targeting construct (I). (I) is useful for producing a transgenic mouse comprising a disruption in a NOR1 gene and exhibiting increased or enhanced pain response threshold, or impaired balance and impaired motor coordination Gaps 90; Sequence 4400 BP; 1055 A; 1239 C; 1034 G; 1072 T; 0 U; 0 Other; Length 4400;
